

ENVIRONMENTAL ENGINEERING

Environmental engineering is concerned with protecting human, animal, and plant populations from the effects of environmental factors, including toxic chemicals and wastes, pathogenic bacteria, and global warming.

Environmental engineers also try to minimize the effect of human activities on the physical and living environment so that we can all live more healthy lives. This field builds on other branches of engineering, especially civil, chemical, and mechanical engineering. It also builds on information from many of the sciences, such as chemistry, physics, hydrology, geology, atmospheric science, and several specializations of biology which include ecology, microbiology, and biochemistry. Students who elect to study environmental engineering will become familiar with many of these areas because maintaining and improving the environment requires that problems are evaluated and solutions found using a multidisciplinary approach.

Students wanting specific information about the major are encouraged to stop by the department office in Curtis Hall, room 251, call the department at 215-895-2341 or visit their website at www.cae.drexel.edu.

Employers who have hired Drexel students include:

Aqua Pennsylvania, Inc.
GE Aviation
CHPlanning
Criterion Lab Inc.
ConocoPhillips Company
Sunoco, Inc
Philadelphia Streets Department
Roux Associates
CertainTeed Corporation
URS Corporation

JOB TITLES

Environmental Engineer
Field Analyst
Health and Safety Co-op
Lab Technician

Project Engineer
Research Assistant
Water Treatment Associate

Please refer to the SCDC website (www.drexel.edu/scdc) for our most recent co-op salary information.
