

## CONSTRUCTION MANAGEMENT

Construction management is a dynamic profession that is a combination of art and science. While an understanding of the technical aspects of construction is extremely important, it is also essential that construction professionals have knowledge of the business and management aspects of the profession. Construction has traditionally been a very conservative industry. The increasing rate of technological development and competition in the industry serves to accelerate the development of new construction methods, equipment, materials and management techniques. As a result, there is an increasing need for innovative and professionally competent construction professionals. Students in this program receive broad academic, technical, business and construction management courses designed to produce well-rounded construction professionals.

Construction management majors are prepared for all phases of operation and management of construction including cost estimating, project scheduling, and planning. Students are able to choose from a range of subjects in the social sciences and humanities to satisfy liberal arts and free elective requirements. When pursued part-time, degree completion takes an average of six years.

Students wanting specific information about the major are encouraged to stop by the department office at 3001 Market Street, call the department at 215-895-6024, or visit their website at [http://goodwin.drexel.edu/about\\_advisors.php](http://goodwin.drexel.edu/about_advisors.php)
