INFORMATION SYSTEMS

Bachelor of Science in Information Systems (BSIS) emphasizes the efficient design and use of information and information technologies. The information systems curriculum has no single application focus. It is directed to the art and science of managing information in all application environments. Students learn how to determine information needs, design appropriate information systems, manage those systems, and measure the systems' performance. The emphasis is on the users of computers, and on building professional-level information systems skills. To further emphasize the business aspect of the degree, the BSIS curriculum includes a built in business minor.

Students wanting specific information about the major are encouraged to stop by the department office at room 306 of the Rush Building, call the department at 215.895.2474, or visit their website at cci.drexel.edu

Employers Who Have Hired Drexel Students Include:
Cigna Corporation
COMCAST CORPORATION
Day & Zimmermann, Inc.
Dechert, LLP
Drexel University
Independence Blue Cross
